

Cinema 4D needs to be updated to the latest version as plugins designed for them cannot be installed in earlier versions.

1) Clean installation - Cinema4D top menu -> Edit -> Preferences -> Plugins -> add the full path of the folder containing the motiondesignschool.xdl64 file, for example:

Add the path C: \ USERNAME \ MDSOffsetEffector

xdl file is respectively located:

C: \ USERNAME \ MDSOffsetEffector \ motiondesignschool.xdl64

2) Copy the MDSOffsetEffector folder to C: \ Program Files \ Maxon Cinema 4D R23 \ plugins

Restart Cinema 4D after performing either installation method. You cannot name the MDSOffsetEffector folder as just "Offset" (as well as in several similar names as they are already used by the Cinema 4D system tools).

Current versions of plugins are available for R21-R24 for Windows, and R21-R23 for MacOS, and only for Intel x64 (Apple M1 is not supported yet).
